

NOTIFICATION / BUTTON

For this type of sensor it is recommended to use a breadboard adapter as in the image below. Careful! Power supply to 3.3V DC. Regardless of the type of application you want, closing the circuit between GND and GP2 will signal this action.

As a model...

In order to have 3.3V DC a DC-DC step down power supply module is recommended.

As a model...

And power supply can be done with a transformer from 230V / 110V AC to 5V DC
