

RELAY

1. For the larger connector as seen and specified and on the board, the middle is common the left is normally open and the right is normally closed. And the small one 5V power supply.

2. In order to be fully functional it is necessary to remove the resistance marked in the image below, and a bridge made between the pin marked in the second image below.

As a model...

And power supply can be done with a transformer from 230V / 110V AC to 5V DC
